**Sunflower is one of the major predominant oil crops in the world and Romania noted the first place in sunflower seed harvested production (ca. 2.1 Mt) in 2020.**

**The chlorogenic acid (CGA) is the main polyphenol; sunflower by-products are rich in protein (27-63%), ash (6-9.5%), oil (<1.0% to 5.6%), polyphenols (2-5%) and other nutrients, making its use applicable in food industry.**
